Art Unit: 1761

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 and 15-18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kuraishi et al for the reasons set forth in rejecting the claims in the last Office action (Paper No. 4). The amendments to the claims and the new claims are not seen to influence the conclusion of unpatentability previously set forth.

Kuraishi et al teach a process for producing cheese using transglutaminase where the transglutaminase is added after curd formation in the amounts claimed (see entire patent, especially Example 1).

The claims appear to differ as to the surface area.

The claimed surface area would be inherent and/or obvious to that of Kuraishi et al as the same amounts and process steps are utilized.

Art Unit: 1761

Applicant's arguments filed August 5, 2002 have been fully considered but they are not persuasive.

Applicant argues that Kuraishi et al do not teach a solid curd where the transglutaminase must remain on the curds in the applied concentration and the curds must be pressed in the presence of transglutaminase to effect bonding.

Kuraishi et al teach adding transglutaminase after curd formation and Applicant does not specifically claim a solid curd.

Kuraishi et al teach the claimed amounts of transglutaminase (see entire document, especially Example 1), and at least 5% appears to be met as the same amounts are employed.

In the absence of a showing to the contrary, transglutaminase is present in Kuraishi et al at the time of pressing as Kuraishi et al does not disclose otherwise. It is also noted that remaining transglutaminase would inherently be present during pressing and would effect bonding.

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.

All of the claim limitations and arguments have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.

IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. § 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.
